As I travel the eastern seaboard, XM's traffic and weather allows me to find out the problems in the next city (north or south) by one click rather than have to hunt and peck on my am dial and wait 20 minutes for the info I need. This service is invaluable to me, during a recent trip to Washington DC, while in Baltimore I checked on DC traffic, XM identified a traffic problem allowing me to take a different route from Baltimore, this would be impossible with "traditional" radio. I would reconsider my subscription to XM without this service available. Thank you for your consideration.
